

Better by design Autodesk®

As a world leader in 2D and 3D design, engineering and entertainment software, Autodesk delivers the broadest product portfolio, helping over 9 million customers, including every member of the Fortune 100, to innovate continually through the digital design, visualisation and simulation of real-world project performance.

From architecture, manufacturing, transportation and utilities to telecommunications, video games, television and film, Autodesk customers are leading the 2D and 3D design world by improving their design processes through increased efficiency and productivity. By enhancing collaboration and communication and digitally improving the real-world performance of projects before they are built, Autodesk customers are solving their business challenges, avoiding costly rework, accelerating project cycles and time to market and ultimately gaining competitive advantage.

Autodesk is a recognised industry leader.

- Autodesk has been setting the standard for design and engineering software since the introduction of AutoCAD® software more than 25 years ago.
- 100 percent of the Fortune 100 use Autodesk products to design, visualize, and simulate their projects to save time and money, enhance quality, and foster innovation.

Autodesk delivers the broadest portfolio of design and engineering software to empower customers to digitally design, visualize, and simulate their ideas.

- **Design?** Author and explore design ideas from initial concept to development and documentation.
- **Visualize?** Experience, communicate, and market design intent through animations, walkthroughs, and photorealistic renderings.
- **Simulate?** Analyze and test how a design will perform in the real world.

Autodesk has a broad business network of users and partners.

- 9+ million users globally
- 1,700 resellers providing a global sales network
- 3,300 development partners providing innovative products and services based on Autodesk® technology
- 2,000 Authorized Training Centers offering accredited classes to meet the needs of today's design professionals
- 2+ million future design professionals trained each year on Autodesk technology

Autodesk is a recognised market leader in the following Industry solutions:

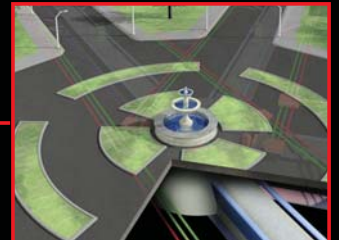

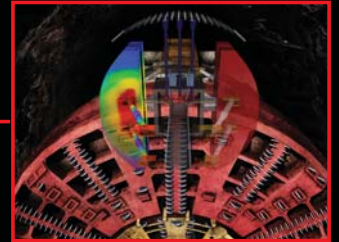

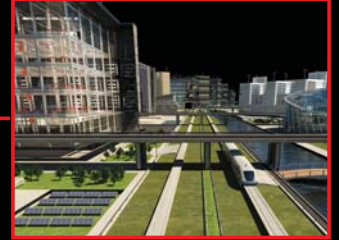

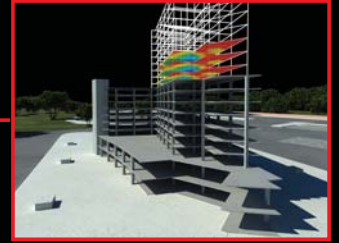

- Architecture, Engineering and Construction
- Automotive and Transportation
- Education
- Government
- Manufacturing
- Utilities & telecommunications
- Media and Entertainment

Autodesk customers innovate through increased efficiency and productivity, solving business and design challenges for competitive advantage.

- **Efficiency?** Optimizing designs digitally before they are built helps customers avoid costly rework and minimizes the need for physical prototypes, resulting in a more sustainable process.
- **Productivity?** Improved collaboration, coordination, and communication among teams accelerates project cycles and time to market.

Autodesk customers across a variety of industries improve their design process for everything in the built world through:

- Digital Prototyping (DP) enables customers to design, simulate, and validate their projects, saving time and money and getting their products to market faster.
- Building Information Modeling (BIM) is an integrated process that allows architects, engineers, builders, and owners to explore a project's key physical and functional characteristics digitally before it's built.
- Infrastructure Modeling (IM) provides a comprehensive process for designing, visualizing, and simulating network-scale infrastructure assets, both above and below ground, with an intelligent 3D model.
- Digital Entertainment Creation (DEC) allows creation of unique entertainment experiences using state-of-the-art digital authoring and runtime technologies.
